CUTLINE

HOW MUCH HORSEPOWER an engine is actually delivering is the question that the dynamometer, here being installed behind an 8V71 GM engine, can help answer. Cariboo College trainees in the Advanced Diesel and Gas Technician program learn how to install and use this equipment as one part of their nine-month course of study. In the photo, trainees Darrell Ranger (standing) and Matthew Howes (crouching) are performing the installation under the eye of Instructor Art Meger.
